

Kelly W36 Disc Chain

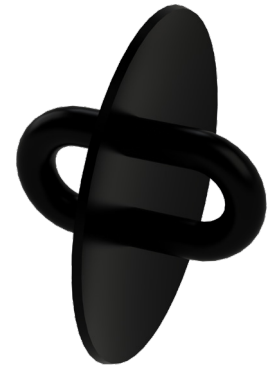

Our standard, tried and tested work horse

The W36 Disc Chain is a lightly curved disc made from wear resistant steel welded to a heavy chain, this offers superior wear resistance and reliability.

Ideal for mulching residue and levelling soil, the W36 Disc excels at splitting and breaking residue to accelerate decomposition.

Combining the W36 with the CL1 Disc Chain provides a lower cost, and provides an easier pulling option that handles wetter conditions.

Simply fit the CL1 to the front and the W36 to the rear to create the perfect seedbed.

Weight: 36lb/ft
Spacing: 7"
