The HAY MASTER

Min-Till Drill for Hay Pastures

The **Hay Master** by Kasco is ideal for pasture renovation, roadside work, wildlife habitats and erosion control. With a tight 6” row spacing, you are guaranteed tighter germination of a wide variety of grass seeds. Our rugged metering system ensures easy and accurate calibration to any smooth seed, for less seed waste and better pasture development. With **Kasco’s** all spring-loaded design—both on the coulter blades and on the cast iron cultipacker—the **Hay Master** will follow the contour of even the roughest terrain. The close-coupled frame allows use on smaller tractors and offers extra maneuverability.
