

Kelly Spike Disc Chain

Heavy duty spiked disc chain combines effectiveness with utility

With 10 spikes surrounding the disc, the Spike Disc Chain be fitted either in a trailing or leading orientation. In the trailing direction the levelling and incorporating action combine to supply a shallow running, self cleaning seedbed preparation tool.

The Spike Disc Chain is very effective at removing weeds, making it an ideal tool for pre or post seeding herbicide incorporation. In the more aggressive leading orientation, the Spiked Disc Chain work as a 'first pass' light tillage tool, levelling and preparing a seedbed.

The shallow working depth means the spike discs are light to pull and will work in wetter conditions.

**Weight: 57lb/ft
Spacing: 5"**
